The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 11 and 15-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Srimanth et al in view of Hirth et al, US Patent 5,942,385. The former discloses the synthesis of some 3- (bicyclo- and tricyclo-heteroaryl)-coumarins all of which contain a thiazolo moiety . The compounds showed very good activity against different tumor cell lines.

Compounds 2a-2h of the reference contain the moiety that applicants name benzo[d]imidazo[2,1-b]thiazol-2-yl. The reference uses imidazo[2,1-b]benzothiazole to refer to this ring system. See 2-(2H-1-benzopyran-2-one-3-yl)imidazo[2,1-b]benzothiazoles at p. 390 bottom of col. 2.

It is known that the amount of VEGF production in a tumor cell from a patient is indicative of the virulence of a tumor. It is also known that the amount of inhibition of said production of VEGF by a clinical candidate compound is a factor to be considered in the decision of whether to use that known anti-cancer compound to treat the patient.

See the latter, especially the Abstract and the last 2 paragraphs of col. 13.

Thus it would have been obvious to test the affect of known anti-cancer compounds on tumor cells of a patient in the in vitro VEGF tests described by Hirth et al.
